piante e prospetti prefabbricato proposta New House

L'idea base è rivestire la struttura prefabbricata con due obiettivi:

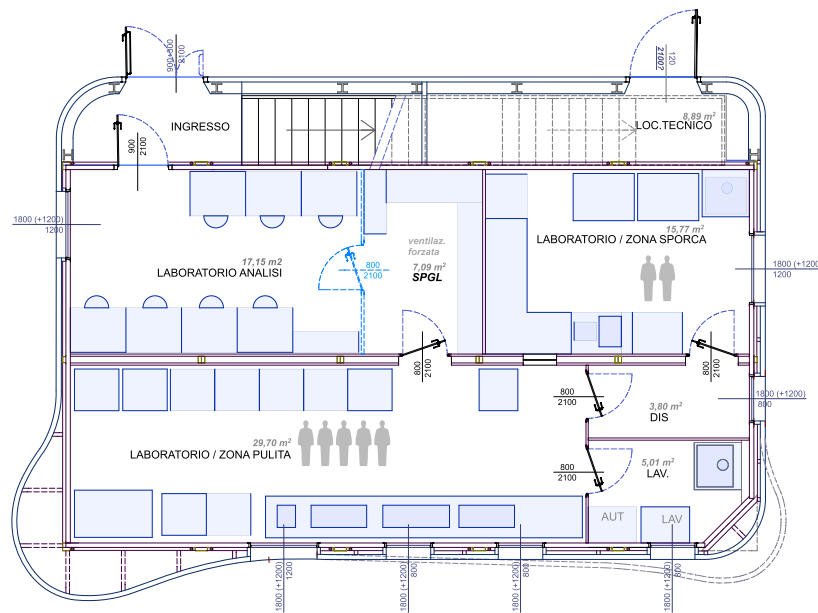

- 1- migliorare l'isolamento dell'edificio, il comfort interno e la prestazione di isolamento per le strumentazioni;
- 2- dare qualità estetica all'edificio, in continuità con il CMR principale.

E' anche l'occasione per dare un ritmo differente alle finestre.

ipotesi nuova proposta con rivestimento ceramico laminam

Plan. PTPlan. P1°

Il prodotto utilizzato è una lastra di Laminam®, colore bianco neve, di spessore 3 mm e di peso di kg 7/mq, supportata o meno da fibra di vetro per resistere nella movimentazione; il taglio customizzato è frutto di collaborazione con il produttore: si prevedono tagli simili a quelli già effettuati nell'edificio CMR.

La scelta del materiale nasce dalla volontà di procedere in continuità con l'edificio principale esistente. Le lastre sono durevoli, facilmente pulibili e richiedono poca manutenzione scelta *in continuità* con il progetto già realizzato.
